

Introduction

SCHOTT is a multinational group present around the world. This allows our customers to talk with a knowledgeable professional, in the comfort of their own culture and language, at their local site.

For more than 40 years, SCHOTT has developed fiber optic products for a diverse range of applications. Furthermore, SCHOTT developed LED solutions for illumination components in an attempt to continuously offer our customers the most up-to-date technologies.

Light is the key element to make things visible. The goal of lighting in stereo microscopy and macroscopy is to enhance the contrast of the object to distinguish the feature of interest. For optimum results each feature requires a different illumination technique.

SCHOTT offers a broad range of standard fiber optic and LED lighting products with an extensive range of light guides and accessories, which are listed in this catalog.

We have a knowledgeable sales and engineering staff to support our customers before, during, and after the sale. Mechanical, optical and electrical engineers and technicians enable quick responses to specific requests. Product demos, in-plant consultation and quick response are the basis of being close to the customers. Our Customer Service departments will provide all the information you need.

Ongoing customer feedback enables us to maintain a high level of service and product excellence. Supported by SCHOTT's Vision 2010 program we strive to satisfy our customer's requirements and continuously improve our processes and quality for your benefit.
