

SCHOTT Termofrost

Glass doors for refrigeration systems

SCHOTT

glass made of ideas

This is not just a slogan, this is our business philosophy. Every product is only as good as the idea behind it. Ever since the company was founded in 1884, SCHOTT has applied this philosophy, listening to customers' ideas and turning them into reality.

Our purpose is to improve how people live and work through expert solutions in speciality materials, components and systems. This is why we have made it a rule to work with our customers, rather than work for them. This has led to our success: SCHOTT, a technology based concern, is Europe's leading manufacturer of specialist glass and systems. Run by SCHOTT Glas, based in Mainz, Germany, and a member of the Carl Zeiss Foundation, it employs about 19,000 people in over 70 companies worldwide.

SCHOTT Termofrost AB, based in Arvika, Sweden, is Europe's leading manufacturer of glass door and frame systems for commercial freezers and refrigerators. With over 30 years experience of cold-storage technology and glass production, it has developed a unique technology which effectively separates cold from warm. The result is complete condensation-free glass doors for frozen and chilled food display.

SCHOTT UK Ltd is the UK subsidiary of SCHOTT, responsible for sales, marketing and distribution of the company's glass products throughout the UK and Ireland, and acts as the sole representative of SCHOTT Termofrost products.

Innovative, effective and attractive

Solutions for frozen & chilled food display

Frozen and chilled products are amongst the most demanding to deal with. In addition to requiring major investment, they are also associated with high operating costs, lots of handling and short life qualities.

SCHOTT Termofrost's refrigeration and freezer door and frame systems offer a solution to the growing market for chilled and frozen foods and at the same time address the need for displaying the goods in an attractive, energy efficient and space saving way.

For operators who are interested in reducing their costs relating to sales and storage, these products offer opportunities to achieve higher profit margins. SCHOTT Termofrost's refrigeration and freezer door and frame systems offer a solution to maximise display of products and their selling exposure, and at the same time are energy efficient and space saving. By having a vertical display, effective use is made of the shop area.

The main benefits are:

- high food quality – food stored at a constant temperature
- low energy consumption – energy efficient
- space saving – maximised and attractive display

These benefits will become increasingly significant in the future as the food quality issue gains momentum, the price of energy rises and the cost per square metre within stores increases.

Condensation-free - 5 year guarantee

Toughened glass is used in all SCHOTT Termofrost doors. Continuous development work is carried out in the laboratory and the performance of products is examined under uneven load and slam tests. We offer a 5 year guarantee of no condensation between glass panels on all models.

Freezer doors for Cold Rooms

SCHOTT Termofrost display solutions for Cold Rooms are designed to store frozen food products at temperatures as low as -24°C in complete safety.

SCHOTT Termofrost Cold Room doors feature a special coating on the inside of the glass. This coating helps to prevent condensation and, in turn, significantly increases the visibility and saleability of products.

Quality built

Because all our products are rigorously tested for quality and durability, every SCHOTT Termofrost door carries a five year guarantee against condensation. Only through our in-house inspections and attention to detail are we confidently able to do this.

Other benefits include:

- ✘ Electrically heated glass doors & frames to eliminate condensation
- ✘ Toughened glass for safety
- ✘ Extensive range available ex-stock
- ✘ Triple glazing

Refrigeration doors for Cold Rooms

SCHOTT Termofrost door systems for Cold Rooms provide a solution to display dairy products, which need to be stored at temperatures as low as +2°C.

The doors are double glazed and come fully toughened for safety and durability.

Quality built

We are proud to say that at SCHOTT tradition still reigns. This means that every door is meticulously built to assure total quality which in turn allows us to offer a 5 year guarantee against condensation.

Other benefits include:

- ✘ 2 layer toughened glass for safety
- ✘ Option of heating in areas of high humidity
- ✘ Fully anodized aluminium frame
- ✘ Complete lighting system

Cabinet doors

For areas where cabinets are required, SCHOTT Termofrost offers its OEM customers a full range of both full size and half size doors to suit all applications. All products are developed in close cooperation with customers to achieve optimal performance together with high cost efficiency.

Approval

All doors come with the CE mark, which means they meet the toughest European regulations and, of course, the same benefits as the rest of the SCHOTT Termofrost range.

With 30 years of cold storage experience to draw upon, and with the highest quality materials and manufacturing, you can be sure that our doors will provide you with many years of trouble free use.

Other benefits include:

- × Toughened glass for safety
- × Range of sizes
- × Fully anodized aluminium frame
- × Complete lighting system

Flexi-shelf system

In order to offer you the widest choice, and to complement our Cold Room systems, SCHOTT Termofrost also provides a versatile shelving system for storing chilled and frozen foods.

The Flexi-Shelf system helps you to create an attractive and logical display, and will make stock control and replenishment much easier.

With its gravity feeding shelves, that pull stock to the front, you will always know at a glance when your shelves need replenishing.

Other benefits include:

- ✘ Elegant and flexible
- ✘ Smooth handling of stock
- ✘ Easily installed
- ✘ Cost effective

Gravity feeding shelves

Gravity shelves always give a well stocked display. Flexi-shelf can be fitted at many angles.

Easy replenishment

Flexi-shelf system lets you see when your shelves need replenishing.

Complete System

Flexi-shelf system includes shelf dividers, slide conveyors, pack hooks and price marking strip.
