Processed Glass – News Flash Glass for Museums 2/2015

Hot Topic: Protective glass against many dangers: fire, gunfire, vandalism and UV rays

SCHOTT products provide preventive protection for museums and art exhibitions

The product portfolio of the international technology group SCHOTT includes various safety glasses for comprehensive protection of museums, exhibition halls and all types of art work. The company has played a pioneering role in the development of glass laminates that withstand burglary attempts and shelling, yet offer fire resistance for higher building safety. Furthermore, SCHOTT offers picture framing and safety glazing that not only protect works of art and paintings from vandalism. Representatives of SCHOTT will give presentations on "Transparent Security" at this year's event series "Das grüne Museum" (The Green Museum) in Frankfurt/Main on October 8, in Berlin on October 14 and in Vienna on October 28.
