

SCHOTT Termofrost®

SCHOTT Termofrost® ECO-S Energy saving system for freezer

Product Description

The SCHOTT Termofrost® ECO-S patented energy saving system is designed to minimize energy consumption of heated freezer frames and doors. It is monitoring the humidity and temperature constantly and supplies only the amount of power needed to keep the frame and glass free from condensation.

Go green with the SCHOTT Termofrost® ECO-S energy saving system. It is the smart way to cut costs. You can save up to 60% of the energy that frames and glass normally consume. It consists of three modules, the power module, the temperature sensor for the freezer and the CPU with humidity sensor for the store. It is easy to retrofit on existing SCHOTT Termofrost® freezer installations.

Features

- LED is to show current operation state
- Short pay- back period
- Consist of three modules, the power module, the temperature sensor for the freezer, and the humidity sensor for the store
