

A row of seven glass display cases is mounted on a wall with vertical wood-grain paneling. Each case is illuminated from within, showing various objects. The cases are arranged in a line that recedes into the distance. The lighting is warm and focused on the items inside the cases.

It is often said that “what is on the inside matters the most” and in this case we could not agree more. High transparency, scratch resistance and geometrical accuracy make SCHOTT glass tubing and rods the ideal partner to showcase your products.

By using a round glass product display it enables complete focus on the product that is been presented. No attention is taken away by corners or edges due the cylindrical shape.

Whether it be used for high end retail, fashion, the latest technology gadgets or exquisite jewelry. SCHOTT glass tubes and rods enable you to present to the highest standards what matters the most to you.

The glass tubing and rods are available in diameters from 3 mm up to 460 mm with a length up to 10,000 mm depending on the type used.
