

CERAN CLEARTRANS®

Transparent SCHOTT CERAN® glass-ceramic cooktop panels for induction with individual design possibilities

Imagine the possibilities with a transparent cooktop panel

CERAN CLEARTRANS® is a transparent glass-ceramic without nubs on the underside. It has a coloring underside print that can be combined with additional topside decoration colors. This offers a completely new dimension of designs and user functions. CERAN CLEARTRANS® is specifically developed for induction heating.

CLEAR aida grey

Multiple design possibilities through various colors and textures

Key benefits of CERAN CLEARTRANS®

- Customized designs: Different combinations of topside decoration and underside prints enables countless design possibilities
- "CLEAR" colors stand for coloring coatings printed on the area of the underside combined with a sealing coating for protection
- "smart" colors stand for additional optional semitransparent coatings for displays and touch interface
- "deep" colors stand for an additional optional underside decoration that allows to visualize graphic elements with clear contours as well as decoration patterns
- Full light color options and multi color visibility
- All light colors for high resolution displays

CERAN CLEARTRANS®

Transparent SCHOTT CERAN® glass-ceramic cooktop panels for induction with individual design possibilities

One of our major breakthroughs: a transparent cooktop panel

Thanks to the interplay of a coloring print on the underside of CERAN CLEARTRANS® and printing on the top side, we give cooking appliances completely new designs. This means you have endless options when it comes to making your unique product stand out from the competition.

Multi-dimensional impressions

CERAN CLEARTRANS® with high resolution display

Product characteristics

- No nubs on underside
- Specifically developed for induction
- Touch displays applicable for convenient visualization and user guidance
- Broad range of eco-friendly topside decoration colors (lead-free) engineered by SCHOTT
- Broad range of underside prints (from ivory to black)
- Anti-fingerprint effects especially with grey underside prints
